## **Flatiron Awarded \$96 Million Contract for Wet Weather Treatment Station**

**Broomfield, Colorado (December 4, 2017)** – Flatiron Construction Corp. (FLATIRON), one of the largest infrastructure contractors in North America, has been awarded the contract to complete the Georgetown Wet Weather Treatment Station located in King County, near Seattle, Washington.

The contract, valued at \$96 million, includes the construction of a combined sewer overflow wet weather treatment station, related pipes, and a new outfall structure to release the treated water into the nearby Duwamish River. Once completed, the station can treat up to 70 million gallons of combined rain and wastewater per day, greatly reducing untreated wastewater and stormwater that would otherwise spill into the Duwamish River.

Construction is expected to begin soon, with the facility anticipated to be fully operational by late 2022.

“We’re honored to play such an important role in improving water quality in the Seattle area for King County,” said Roy Fazio, Flatiron’s Vice President, Water Group. “This highly collaborative project reflects the commitment of the King County Wastewater Treatment Division and Georgetown community to environmental and socially sustainable practices.”

### **About Flatiron Construction Corp.**

FLATIRON develops innovative solutions to build transportation and infrastructure projects across the U.S. and Canada, including roads, bridges, highways, rail transit, airports, dams, water treatment and storage facilities for both public and private clients. FLATIRON delivers projects through a variety of contracting methods, including construction manager/general contractor, bid-build, design-build, and public-private partnerships.
